Rohde & Schwarz

Passive and active quality measurements of 5G networks at Hannover trade fair

Rohde & Schwarz demonstrates its 5G Site Testing Solution (R&S@5G STS) that allows to measure quality and performance of the private and public 5G (and LTE) networks available at the Hannover fair grounds. By performing passive and active measurements, the test solution verifies RF parameters (such as network coverage and signal quality) and delivers the KPIs (such as data throughput and latency) that can be achieved in the available 5G networks.

Speaker use case on site: Christian Müller, Senior Sales Manager / Business Development Mobile Network Testing
